**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 28, 2009 has been entered.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 16-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Lunteren et al., US 2002/0191605 A1 (hereafter referred to as Lunteren).
4. Regarding claim 16, Lunteren taught a system for packet classification (abstract), comprising:
- a pre-processor configured to assign an associated identifier to a field within a header of an incoming packet (paragraph 69);
  - a first memory device including a first set of binary patterns (first memory 4, paragraph 67);

a second memory device including a second set of binary of binary patterns (second memory 4, paragraph 67);

a third memory device including instructions for configured to process the first set of binary patterns and the second set of binary patterns (processor, paragraph 67); and a processor configured to match the associated identifier with one or more patterns from either the first set of binary patterns or the second set of binary patterns using a range of values associated with each of the first set of binary patterns and the second set of binary patterns (paragraph 69) and to process the one or more patterns in accordance a priority computation to determine which with an one of the instructions is to be used to process the incoming packet (paragraph 70).

5. Regarding dependent claim 17, Lunteren taught the field is a network address (paragraph 85).

6. Regarding dependent claim 18, Lunteren further comprising: a fourth memory device configured to store a result corresponding to the matched pattern received from the processor (paragraph 67).

7. Regarding dependent claim 19, Lunteren taught a system further comprising: means for determining priority among the one or more patterns (paragraph 70).

8. Regarding dependent claim 20, Lunteren taught a method for packet classification (abstract), comprising:

assigning an associated identifier to a field within a header of an incoming packet (paragraph 69);

maintaining a first set of binary patterns in a first memory device and a second set of binary patterns in a second memory device (multiple memory 4, paragraph 67); matching the associated identifier with one or more patterns from either the first set of binary patterns or the second set of binary patterns using a range of values associated with each of the first set of binary patterns and the second set of binary patterns (paragraph 69); and

processing the one or more patterns in accordance a priority computation to determine which with an instruction associated with a matched pattern one of the instructions is to be used to process the incoming packet (paragraph 70).

#### ***Allowable Subject Matter***

9. Claims 21-36 are allowed.

#### ***Response to Arguments***

10. Applicant's arguments with respect to claims 16-20 have been considered but are moot in view of the new ground(s) of rejection.
